**\* LAST TIME BUY: AUGUST 31, 2014. CLICK HERE FOR OBSOLESCENCE NOTICE OF FEBRUARY 2014.**

- ① Typical at T<sub>A</sub> = +25°C under nominal line voltage and full-load conditions unless otherwise noted.
- ② Ripple/Noise (R/N) measured over a 20MHz bandwidth.
- ③ Balanced loads, 10% to 100% load.
- ④ Nominal line voltage, no-load/full-load conditions.

**As of September 2014, ONLY the following part numbers will be available: BWR-12/125-D12-C; BWR-12/125-D48-C; BWR-15/100-D48-C**

**PART NUMBER STRUCTURE**

**B | WR | 15 | / | 100 | - | D48 | - | C**

Output Configuration:  
B = Bipolar

Wide Range Input

Nominal Output Voltages:  
±5, ±12 or ±15 Volts

RoHS-6 compliant\*

Input Voltage Range:  
D5 = 4.5-9 Volts (5V nominal)  
D12 = 9-18 Volts (12V nominal)  
D48 = 18-72 Volts (48V nominal)

Maximum Output Current  
in mA from each output

\*Contact Murata Power Solutions Technologies for availability

| <b>Weight</b>  | 0.5 ounces (14.2 grams)   |

① These power converters require a minimum 10% loading to maintain specified regulation. Operation under no-load conditions will not damage these devices; however they may not meet all listed specifications.

② Application-specific internal input/output filtering can be recommended and perhaps added internally upon request. Contact DATEL Applications Engineering for details.

③ Devices can be screened or modified for higher guaranteed isolation voltages. Contact DATEL Applications Engineering for details.

④ Devices can be warranted or screened for lower-temperature operation. Contact DATEL Applications Engineering for details. See DATEL's new BST 3W Models for guaranteed operation to -40°C.

### Absolute Maximum Ratings

|  |   |
|--|---|
| <b>Input Voltage:</b>                        |   |
| "D5" Models                                  | 12 Volts  |
| "D12" Models                                 | 20 Volts  |
| "D48" Models                                 | 80 Volts  |
| <b>Input Reverse-Polarity Protection</b>     | Current must be <2A. Brief duration only. Fusing recommended.   |
| <b>Output Overvoltage Protection</b>         | None  |
| <b>Output Current</b>                        | Current limited. Max. current and short-circuit duration are model dependent. "D12" and "D48" models sustained output short can withstand circuits. |
| <b>Storage Temperature</b>                   | -40 to +100°C   |
| <b>Lead Temperature</b> (soldering, 10 sec.) | +300°C  |

These are stress ratings. Exposure of devices to any of these conditions may adversely affect long-term reliability. Proper operation under conditions other than those listed in the Performance/Functional Specifications Table is not implied.

### TECHNICAL NOTES

#### Floating Outputs

Since these are isolated DC/DC converters, their outputs are "floating." Any BWR model may be configured to produce an output of 10V, 24V or 30V (for ±5V, ±12V or ±15V models, respectively) by applying the load across the +Output and -Output pins (pins 6 and 8), with either output grounded. The Common (pins 5 and 7) should be left open. Minimum 20% loading is recommended under these conditions.

#### Filtering and Noise Reduction

All BWR 3 Watt DC/DC Converters achieve their rated ripple and noise specifications without the use of external input/output capacitors. In critical applications, input/output ripple and noise may be further reduced by installing electrolytic capacitors across the input terminals and/or low-ESR tantalum or electrolytic capacitors across the output terminals. Output capacitors should be connected between their respective output pin (pin 6 or 8) and Common (pins 5 and 7) as shown in Figure 2. The caps should be located as close to the power converters as possible. Typical values are listed in the tables below. In many applications, using values greater than those listed will yield better results.

#### To Reduce Input Ripple

|              |             |
|--------------|-------------|
| "D5" Models  | 47µF, 15V   |
| "D12" Models | 10µF, 35V   |
| "D48" Models | 4.7µF, 100V |

#### To Reduce Output Ripple

|                 |                    |
|-----------------|--------------------|
| ±5V Outputs     | 47µF, 10V, Low ESR |
| ±12/15V Outputs | 22µF, 20V, Low ESR |

In critical, space-sensitive applications, DATEL may be able to tailor the internal input/output filtering of these units to meet your specific requirements. Contact our Applications Engineering Group for additional details.

**EMI RADIATED EMISSIONS**

If you're designing with EMC in mind, note that all of DATEL's BWR 3 Watt DC/DC Converters have been characterized for radiated and conducted emissions in our new EMI/EMC laboratory. Testing is conducted in an EMCO 5305 GTEM test cell utilizing EMCO automated EMC test software. Radiated emissions are tested to the limits of FCC Part 15, Class B and CISPR 22 (EN 55022), Class B. Correlation to other specifications can be supplied upon request. Radiated emissions plots to FCC and CISPR 22 for model BWR-5/250-D12 appear below. Published EMC test reports are available for each model number. Contact DATEL's Applications Engineering Department for more details.

**Figure 2. Using External Capacitors to Reduce Input/Output Ripple/Noise**

**Input Fusing**

Certain applications and/or safety agencies may require the installation of fuses at the inputs of power conversion components. For DATEL BWR 3 Watt DC/DC Converters, you should use slow-blow type fuses with values no greater than the following:

| V <sub>IN</sub> Range | Fuse Value |
|-----------------------|------------|
| "D5"                  | 1.5A       |
| "D12"                 | 1A         |
| "D48"                 | 0.5A       |

**CUSTOM CAPABILITIES**

DATEL's world-class design, development and manufacturing team stands ready to work with you to deliver the exact power converter you need for your demanding, large volume, OEM applications. And ... we'll do it on time and within budget!

Our experienced applications and design staffs; quick-turn prototype capability; highly automated, SMT assembly facilities; and in-line SPC quality-control techniques combine to give us the unique ability to design and deliver any quantity of power converters to the highest standards of quality and reliability.

We have compiled a large library of DC/DC designs that are currently used in a variety of telecom, medical, computer, railway, aerospace and industrial applications. We may already have the converter you need.

Contact us. Our goal is to provide you the highest-quality, most cost-effective power converters available.
