LS module height is 1.7mm typical. YM module height is 1.2mm typical. YC module

Table PZ2 — Definition of Terms

V_Z	Zener clamping voltage measured at current I_{ZT} and 20°C.
I_{ZT}	Test current at which V_Z is measured.
I_{HOLD}	Maximum steady state current I_{PTC} that will not generate a trip event at the specified temperature. Ratings assume I_{FLT} = 0A.
R_{Typ}	Typical resistance between V_{IN} and V_{OUT} pins when the device is at room temperature.
R_{1MAX}	The maximum resistance between V_{IN} and V_{OUT} pins, at room temperature, one hour after first trip or after reflow soldering.
I_{FLT}	Current flowing through the Zener diode.
$I_{FLT\ MAX}$	Maximum RMS fault current the Zener diode component of the device can withstand and remain resettable; testing is conducted at rated voltage with no load connected to V_{OUT}.
$V_{INT\ MAX}$	The voltage (V_{IN} - V_{OUT} "post trip") at which typical qualification devices (98% devices, 95% confidence) survived at least 100 trip cycles and 24 hours trip endurance when "tripped" at the specified voltage and current (I_{PTC}).
I_{PTC}	Current flowing through the PPTC portion of the circuit.
I_{OUT}	Current flowing out the V_{OUT} pin of the device.
Trip Event	A condition where the PPTC transitions to a high resistance state, thereby limiting I_{PTC}, and significantly increasing the voltage drop between V_{IN} and V_{OUT}.
