

research and design investment. The BSC9131 and BSC9132 SoCs also include the MAPLE block for hardware acceleration of common DSP functions such as fast Fourier transform, discrete Fourier transform and turbo Viterbi decoding.

The QorIQ Qonverge line of products has a proven set of hardware and software tools for code development and debug. The CodeWarrior Development Studio is a comprehensive integrated development environment (IDE) that provides a highly visual and automated framework to accelerate the development of the most complex embedded applications. The CodeWarrior tools allow a consistent look and feel for developing code on both cores as opposed to competing solutions that may require multiple debugging platforms. In addition to the IDE, the BSC9131RDB and BSC9132QDS give you the ability to develop and test code on hardware systems before developing your own hardware solution.
